

TTG honoured with National Award for Environmental Solutions (October 2013)

TTG Transportation Technology has received a National Award in the Environmental Solutions category of the Premier's NSW Export Award.

This is a prestigious honour and a true reflection of the fantastic Australian technology we have and the amazing people we have working for TTG, including our research partners at University Of South Australia, headed up Dr Peter Pudney.

Energymiser® is our flagship product, follows over 17 years R&D and is now proven in use across Australia, the UK, New Zealand, India and Africa, for example. It provides real-time driver advice and performance reports to reduce energy consumption and emissions by up to 23%, and can help improve on-time arrivals and utilisation of rail capacity, as well as reduce maintenance costs of trains and railway tracks.

We wish to thank AusIndustry for their ongoing recognition and support.

About TTG Transportation Technology

TTG Transportation Technology is a leading international provider of products and services to optimise energy efficiency, schedules and network capacity of passenger, freight and heavy haul rail; at both planning and operational stages. Combining consultancy, software, engineering and manufacture with domain expertise in all facets of the industry, TTG's solutions are proven in use across Australia, the U.K., New Zealand, India and Africa, for example.

TTG's flagship products follow over 17 years R&D with leading universities: Energymiser® provides real-time driver advice and performance reports to reduce energy consumption and emissions by up to 23%, and can help improve on-time arrivals and utilisation of rail capacity, as well as reduce maintenance costs of trains and railway tracks. Schedulermiser® optimises timetable development during rail planning and provides near real-time decision support.

TTG also provides simulations to optimise design of new rail alignments to minimise subsequent energy consumption and reduce maintenance costs. TTG is an ISO9001-certified Clean Technology company with offices in Sydney, London, Derby and Beijing, has operated for 25 years, and is backed by leading Australian research and patented technology.
